

A control your teams already know how to buy.

Per seat, annual, on contract vehicles your finance team has approved before. It deploys on your own infrastructure, so there is no vendor data-custody to diligence, and no integration project to scope. **The procurement conversation is one you have had a dozen times.**

PRICING · PER SEAT, ANNUAL

\$180

Starter · 50–250 seats
small agencies, departments, pilots-to-production

\$150

Standard · 251–1,000 seats
counties, health systems, state agencies

\$120

Enterprise · 1,000+ seats
large agencies, hospital networks, defense

Two- and three-year terms warrant a 5 to 10 percent discount for term certainty. Volume above 5,000 seats is priced case by case.

WHY IT IS EASY TO CLEAR

- **No data custody.** Verillian runs on your infrastructure and holds none of your content. There is no vendor breach surface to assess.
- **No integration cost.** No changes to the AI tools; nothing to wire up per application.
- **Predictable.** Per-seat annual pricing your finance team already models for endpoint software.
- **Cooperative purchasing.** Pursuing GSA Schedule, NASPO ValuePoint, and state cooperatives, which often allow purchase without a separate RFP.

BUILT FOR YOUR FRAMEWORK

- **CJIS 6.0** · law enforcement
- **HIPAA** · healthcare
- **FERPA** · education
- **CMMC 2.0 · NIST 800-171** · defense
- **FedRAMP-aligned** · government
- **GLBA · SOX** · financial services

The architecture satisfies these by design: evidence is tamper-evident, content is encrypted under your keys, and it operates air-gapped.

Start with a free 60-day pilot at five seats. **No cost, no commitment.**
